

AI 4 Logistics

Unlock the potential of AI in Logistics

AI has the power to transform the way we manage supply chains, optimize routes, handle inventory, and ensure efficiency in every step of the process.

What is Artificial Intelligence?

Artificial Intelligence (AI) is the simulation of human intelligence in machines, enabling them to perform tasks that require learning, reasoning, and problem-solving. Through AI, computers can process data, recognize patterns, and make decisions, all of which pave the way for advancements across various sectors.

Now in words we can understand

Artificial Intelligence (AI) is just a mathematical formula and already part of our daily life since we all use Google, Netflix, Booking.com and Weather Apps.

Simplified:

- AI predicts a number or classification
- GenAI creates content

Where does AI add value in Logistics?

- Improve Service Levels
- Reduce Costs
- Improve Efficiency
- Enhance People & Staff well-being

But...

Where does AI add MOST value in Logistics?

1. Labour & Time
2. Errors, Rework & Downtime
3. Customer Dissatisfaction / Missed Revenue
4. SC Disruptions and Missed Opportunities
5. Non-Compliance and illegal Activities
6. Employee Turnover, Absenteeism and Unavailability

Leverage AI to Reduce the Costs of Non-Performance

Where to start?

AI can significantly optimize decision making, streamline your processes, and provide actionable insights for logistics

Start by exploring pain points in your Plan-Do-Check-Act cycle to define priorities and map AI use cases that will increase your service levels and reduce your cost of non-performance.

Want to know more?

With over 50 years combined experience in Logistics, Transportation & Supply Chain operations & technology, Marco Hendriks (ex-TNT) and Christophe Frère (ex-Quintiq/AIMMS) explored countless innovations and here to guide you during your digital transformation.

Executive Workshop

Better together

Following an initial intake, we collaborate to design an engaging workshop for your team with concrete use-cases of AI in Logistics.

The executive workshop aims to ignite inspiration, create mutual understanding of AI capabilities, align on crucial initiatives that can evolve into an (operations) AI roadmap and an initial pilot project, possibly extended into a full-scale application.

Act Now!

As logistics operations become more complex, the ability to leverage AI is no longer a luxury but a necessity for staying competitive.

AI has the power to transform and give you a competitive advantage with expected double-digit operations cost savings.
